## FÚLVIA PERGOLA

*INCREASE YOUR  
PROTECTION*

**ENG**

## TRANQUILLITY UNDER THE SUN AND RAIN

Saxun's Fúlvía stretched canvas pergola is an expandable solar protection system specially designed to protect from sun and rain all year round.

Its minimalist style with straight lines, together with its varied potential for automation, adds elegance to spaces and increases the comfort of its users.

## PROTECTION AGAINST SUN AND RAIN

Regulates solar radiation **thanks to the properties of the canvas and its automatic operation.**

The system integrates **sealing joints** between the profiles and the canvas to form a **waterproof system** that ensures it can be used on even the rainiest of days.

## MODULARITY

Up to **3 modules** can be assembled to adapt to the needs of every type of installation.

## MAXIMUM DIMENSIONS

1 Module **5.00x6.50x3.00 m**

2 Modules **9.00x6.50x3.00 m**

3 Modules **13.00x6.50x3.00 m**

*Maximum dimensions in width x length x height.*

## REQUIRED ANGLE

Its installation **requires a minimum angle of 15%**, in order to allow for evacuation of water.

## PERFECT LIGHTING

The new protection system allows for the installation of **LED lighting distributed through its poles**, further improving its appearance.

## THE BEST MATERIALS GUARANTEED

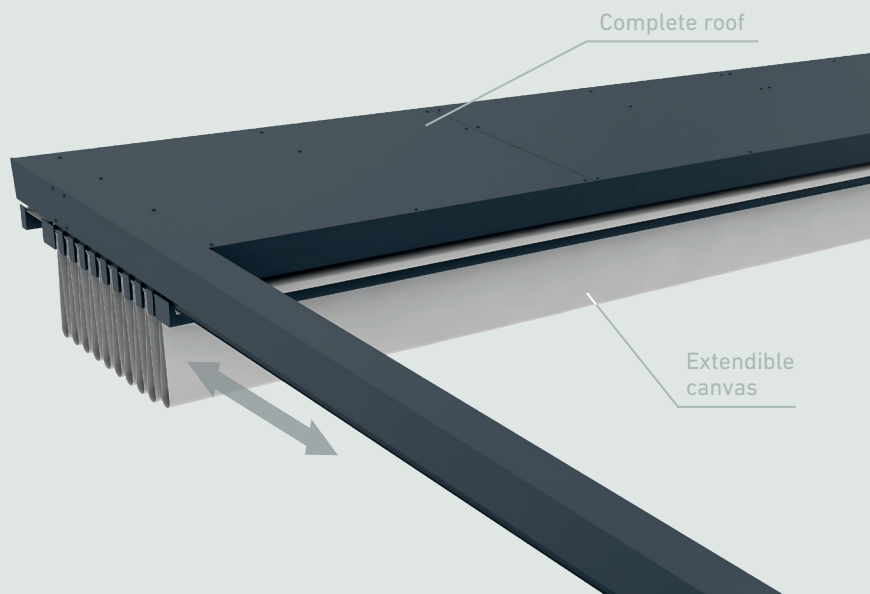

**Aluminium** and **stainless steel** components that guarantee resistance to the elements and corrosion.

## LEADERS IN DURABILITY

Fúlvia is a pergola made of the highest quality aluminium to guarantee a structure that is as solid as possible, allowing you to share unique moments under its shelter.

The stainless steel used in its components is the best antidote against corrosion and the passage of time.

**Aluminium structure and steel components**

## BETTER LIGHTING, MAXIMUM PROTECTION

By choosing to install LEDs along the length of the crosspieces and gutters, you can create a variety of different lighting scenes.

The side enclosure made of glass, PVC or Pre-contraint canvas provides the space with extra protection.

**LED lighting**

**Side enclosure made of glass or canvas**

**Compatible with Wind Screen and drop awnings**

## TOTAL PROTECTION FROM THE RAIN

The sealing joints between the canvas and the profiles ensure that the product is fully impermeable, even in the worst weather.

If the customer chooses free-flow drainage, the water is expelled through slots on the two front columns that are designed for this purpose.

If the user chooses to install a slab channel drainage system, they will be able to recover the rainwater for later use.

### Maximum impermeability

*Fulvia with slab channel drainage.*
